

SatarkPay

UPI/wallet fraud se pehle rok do — aur fraud ho jaye to 3 minute me complaint

- SANGYAN · SEBI × NSDL × SNTC IIT (BHU) · Investor Resilience
- Track A (fraud/scam resilience) + Track B (grievance rights) + Track D (behaviour)
- 2,364 registered teams · 31 peer repos me saturation — SatarkPay 3 naye axes laata hai
- Live demo: [satarkpay_m2.html](#) (offline chalega) · 7 modules · 1 asli fraud case par chala

Problem — scam ab “padhne” ka nahi, “hone” ka hai

SANGYAN guardrails ke andar: koi tip nahi, koi data harvest nahi — sirf suraksha

- 16 crore+ demat accounts · 70% naye Tier-2/3 se · F&O me 9/10 retail traders loss me (problem statement)
- Aaj ke scam chat-se-shuru hote hain: WhatsApp/Telegram par baat → phir UPI app → phir paisa
- Peer repos ka 77% kaam “message paste karo → score dekho” hai — yaani fraud ke BAAD
- Recovery ka golden hour pehla 60 minute hai; usme sahi complaint ho jaye to freeze-trace ka mauka bachta hai
- Asli case (humare evidence pack se): ₹5,000 evidence-visible loss, ₹30,625 maanga gaya, 9 scam families

Solution map — ek journey, saat module

SatarkPay — chat se payment tak, aur fraud ke baad: 7 modules + R38

Lane 1 interception (peer me 0%) · Lane 2 parallel shields · Lane 3 evidence + turant action (R38).

M1 · Chat-Before-Pay — matrix, block nahi

M1 · Chat-Before-Pay matrix — 4 cells, koi auto-block nahi

Saved contact ≈1 min (ya call-confirm) · unknown = 8 min guided · 10+ min chat ke baad payment = notification · officer/offer mila to T3 hold.

M1 live demo — teeno haalat

WhatsApp - Prince Singh (saved)

saved contact - 10 min chat

Journey watch on.

WhatsApp/Telegram khulne ke baad UPI app khula to guard automatically laga.

Star - 9:35

Bhai lai ke ₹1,200 bhij deta hoon

Prince Singh (saved) - 9:36

Haan bhai do, wahi number hai

Prince Singh (saved) - 9:36

jaldi kar, shop band ho rahi @

Feature 1 - Chat-Before-Pay Guard

Do signal milte hain: contact known/unknown + chat session kitni lambi thi (UsageStats). Matrix:

● Saved contact + chhoti chat (1-5-2 min)
1 minute check + plus seedha payment. Ye ek tap me saved number par call karke confirm = payment allow.

● Chat + 10 min ke baad turant UPI
Contact saved ho tab bhi notification = byurki lambi baat + turant payment pressure/concern ka pattern hai (number hack bh ho sakta hai).

● Unknown contact (chhoti chat)
8 min guided check — user to samjhaane me time lagta hai: chat dibara patha = 3 save.

● Unknown + 8 min se lambi chat
Hold + analyst callback (digital-asset / task script). Payment rukta hai. Block rahi — user cancel kar sakta hai.

Timer sirf tab chalta hai jab woh chat screen par ho (foreground dwelt), warna pause — app chhod ke 5 sec me wapas aaye to time nahi milta.

Timer sirf foreground dwell naapta hai; “It's me” dabane se notification nahi khulta — sawal ya trusted-person confirm chahiye.

M2 · Screenshot Radar + repeat-payment guard | M5 · Wallet & AutoPay

The screenshot displays the Satark Pay M2 application interface, which is designed for detecting and preventing fraud. The top navigation bar includes tabs for "Guard ON", "metadata-only", "on-device", and "3-min demo script".

- Screenshot Radar:** A section titled "Payment-screenshot burst + risky source" indicating 3 payment screenshots were detected from an unverified source (quickearn-pro.xyz / task-bot) within 30 minutes. It provides details about the pattern, amount, and confirmation status.
- Recent screenshots (24h):** A grid showing four recent screenshots categorized by type (e.g., PhonePe, Browser). Each entry includes a timestamp, a risk level indicator (L4/L3), and a brief description of the activity.
- OPS CONSOLE:** A central panel displaying a "Repeat-payment guard (R22)" alert. It lists four suspicious transactions with timestamps, amounts, and reasons for flagging (e.g., "3rd payment 24h me → cooling + 'staircase' reason"). To the right, a detailed analysis of the 4th payment shows it was held due to multiple factors: "Asapne 24 ghante me isi account ko 4 baar paisa bheja hai", "Task/investment scam", and "Analyst callback approval".
- Privacy delta — honestly:** A section explaining the principle of "no screen pixels" being shared against the user's identity, listing various entities involved in the process.
- Simulation complete:** A summary at the bottom stating "4 payments, 2 friction events".

Revoke

Feature 6 • Wallet / AutoPay / Link Audit
RULE R20

Ye batata hai: kaunse UPI/wallet apps is phone par hain aur kaunse bank account se juda hai, kaunse auto-pay (e-mandate) chal raha hain, aur konsa app delegate/UPI-Circle ya recurring link rakh raha hai. Red flag: naya mandate + unverified domain + Daily/Weekly frequency.

REAL ANDROID APIS

queryIntentActivities("upi://pay")
sabhi UPI apps

NotificationListenerService
mandate debit alerts

SMS parse (DLT mandate format)
“will be auto-debited”

PSP mandate API (partner hook)
authoritative list

UPI Circle delegate check
naya delegate?

WARNING KAB MILTI HAI

- Daily/Weekly mandate jiska purpose “one-time” bataya gaya
- Mandate ≤ 7 din purana + merchant domain unverified
- Naya delegate add (UPI Circle) — OTP-based “verify” ke naam par
- Ek bank account 4+ UPI apps me linked
- Wallet app jo lambe time se use nahi hua par linked hai
- Verified merchant, monthly, known amount → chup

Note: “connected apps” ka matlab yahan — installed UPI apps + unke linked accounts + autopay mandates + delegates. Kisi bhi app se bank credential share karne ki baat nahi hoti; hum sirf phone par dikhne wali cheezein padhte hain (usage/notification/SMS), aur finance apps ke internal account list ko PSP API se lete hain.

OPS CONSOLE
Mandate-abuse cluster

UPI ID / MERCHANT	FREQUENCY	PEHLI BAAR DEKHA	SIGNAL
quickearn-pro@ybl	DAILY ₹299	2 din pehle	3 victims same ID · L4 domain
attps.premium@a1	WEEKLY ₹1,000	9 din pehle	Telegram task-family F3
netflix@razorpay	MONTHLY ₹649	14 mahine	verified merchant

Ye cluster shared intelligence se banta hai (hashed payee ID, ka5 anonymity) — 3 logon ne ek hi ID par daily mandate diya, to 4th user ko pehle bataya jaata hai.

Daily/unknown mandate = red, one-tap revoke

30 min me 3+ payment-screenshot = amber, 5+ = red

R22: usi payee ko 24h me 3rd payment → cooling (staircase), 4th → hold. Screenshot ki image store nahi hoti — sirf entity + hash.

Link / Domain Check

Payment se pehle — gateway koi bhi ho

https://checkout.razorpay.com/v1/checkout

rbt-nodal-verify.xyz · sbi.onlinekyc-update.top

razorpay checkout · amaz0n-pay-offer

vahan-challan-pay · unknown-but-clean

onlinesbi.sbi

Check karo

Lookalike / fake

checkout.razorpay.com · TLD .com · merchant: quickearn-pro

amber Payment gateway verified hai — par merchant alag entity hoti hai

red gateway ke andar merchant "quickearn-pro" — brand jaisa naam / risky naam, verified nahi

User ko dikhne wali copy (Hi): "Ye checkout.razorpay.com asli company ki website nahi lagti. Yahan payment mat karo. Koi aapko is link par bhej raha hai to woh scam hai."

TURANT: Ruk jao — is page par payment mat karo · Asli app/site khud khud kar check karo (link se nahi) · Kisi ne bheja hai to screenshot + number save karo (1930 ke liye) · Bhejne wale ko call karke known number par confirm karo

Production me + RDAP domain-age (live call), DoT FRI, IAC suspect registry — demo me age/registry simulated hai.

Feature 3 · Domain / Website Trust

RULE R18

Koi bhi request — link, SMS, WhatsApp message, QR ke peeche ka page, ya screenshot me dikha **domain** — usko 4-level ladder par rakha jaata hai. Chahe **payment gateway** legit ho (Razorpay/PayU/Cashfree/BillDesk), agar **merchant ka domain verified nahi** hai to warning milti hai. Kyunki "gateway achha hai" ka matlab "merchant achha hai" nahi hota — ye classic 2026 trick hai.

4-LEVEL LADDER

HEURISTICS (production me + RDAP age, FRI, registry)

L1 · Verified (RBI/NPCI/bank/PSP registry)

L2 · Verified merchant (allowlist)

L3 · Unverified but clean → amber warning

L4 · Lookalike / fake → red warning

Wording principle (deck se):

unknown-clean domain par hum "scam" nahi likhte — "verified nahi hai, dhyaan se" likhte hain. Red sirf tab jab structural proof ho (lookalike/TLD/no-TLS/shortener).

OPS CONSOLE

Domain Trust Registry

verified entries

lookalike hits (7d)

merchant mismatch (gateway)

41

1,284

312

Registry weekly update hota hai: naye verified merchant + naye lookalike clusters (Intel Desk se). Same JSON app me OTA jaata hai — naya detector release ki zarurat nahi.

OPS CONSOLE

Registry view — kaun verify kar raha hai

L3 par bhi count karte hain — warna log warning ignore kar dete hain

L1...L4 ladder + gateway≠merchant warning

Sanchalak — Poochho

"Ye legit hai ya nahi?" · HI/EN · 12 languages

Library: T1-T24 se match · 1930/C/F/RMS pack ready · human analyst chahiye to neechhe button

SEBI / registry check (R26):

red "REG: SEBI12345" SEBI registration number ke format me hi nahi hai (asli: INZ/INH/INA + 9 digits) — aisa number verify nahi ho sakta

Hum "registered hai" certify nahi karte — sirf format + domain + lists check karte hain.

SEBI-registered tip (fake number)

bank ka OTP warning (negation)

digital arrest call

Telegram task offer

KYC/APK SMS

refund-back trap

legit Amazon refund

Sir, main SEBI registered advisor hoon (Reg: SEBI12345). Aap is VIP Telegram group me aaiye — guaranteed 300% profit in 48 hours. Pavment is UPI nar kam.

Poochho

Human analyst se poochho (queue)

Ye demo me rule-engine + threat library par chalta hai (offline). Production me LLM + wahi citations — neechhe dekho.

Client-side redaction on: phone/UPI/aadhaar/account numbers analysis se pehle mask ho jaate hain (koi bhi text bahar nahi jaata).

verdict + 3 reason + registry flag (R26)

Feature 4 · AI Sanchalak (chat LLM)

RULE R19

User chat kar ke puchh sakta hai — WhatsApp chat, email, SMS, screenshot ka text paste karke. Jawab ka structure fixed hai: **verdict → 3 reason (matched signals) → turant kya karo → kya mat karo → threat-library citation**. LLM se **verdict nahi** aata — verdict deterministic rules + domain engine + threat library se aata hai, LLM sirf **samjhaata hai** (ye hallucination-safe design hai).

PIPELINE

LLM MODE (production, 1 env var)

1 input normalise (text/link/OCR)

2 signal extract: platform, vector, link, UPI ID, amount, urgency words

3 domain engine (M3) + payee intel + journey memory

4 family map (F1-F18) → verdict + confidence

5 LLM = explanation layer (HI/EN/12 lang), citations only from library

6 "pakka nahi" par human queue + 1930 pack

SATARKPAY_LLM=1 + key (Grog/Gemini/OpenAI/self-host)

system prompt = "kabhi naya verdict invent mat karo, sirf diya gaya verdict explain karo"

RAG = threat library (T1-T24 + Intel Desk ke naye T25+)

prompt-injection guard: user text untrusted, tools nahi

PII: text **device par hi** rakhta hai, server ko sirf extracted entities + hash

log: verdict + reason codes (audit), raw chat nahi

Honest limit:

"naya" scam jo library me nahi hai, us par confidence low rahega — tab jawab "paka nahi bata sakta + human/1930" hota hai, fake confidence nahi. Yahi cheez misuse ko bhi rokta hai.

OPS CONSOLE

Sanchalak queue

Escalated: "RBI safe account" video call — ₹85,000 pending

verdict: F1 · confidence high · user ne 3 min me reply kiya · analyst callback <5 min · rule R1 attach

Live

Low-confidence: "courier ne bola customs fee ₹2,100 UPI karo"

library me partial match (T23/T22) · naya variant ho sakta hai → Intel Desk review queue me bheja

review

R26: SEBI number ka format (INZ/INH/INA + 9 digits) + official portal domain check — “registered hai” kabhi certify nahi karte. R27: bank ka apna OTP-warning scam nahi ginta. R28: PII device par hi mask.

SatarkPay M2 · New Module Pack — ye interactive demo synthetic data + public headlines (live crawl 2026-10-02) par chalta hai. Har verdict demo me rule-engine se aata hai (deterministic), koi LLM call nahi — production me wahi verdict LLM se explain hota hai. Naye rules R15-R23 deck ke R1-R14 ke saath chalte hain. Honest limits: Android telemetry (UsageStats/Notification/SMS) real device par permission + Play-policy review maangta hai; iOS par kuch signals nahi milte (graceful degrade); screenshots ka OCR opt-in hai (image store nahi hoti, sirf entity + hash). Block kuch bhi auto nahi hota — hamesha user ya human decide karta hai.

Feature 7 · Auto-Report (1930 / NCRP / cyber-cell email)RULE R24 / R25

User ko fraud ka pata chalte hi SatarkPay ek **report pack** banata hai — 4 minute me, bina kuch type kiye: saare screenshot **crop** (status bar/nav hata), **redact** (a/c numbers blur — do versions: full = police/bank ke liye, blur = share ke liye), **OCR se entities** (UPI ID, txn ID, UTR, links, amounts), **QR decode** (7349*****@ptaxis) → redact (a/c numbers) + hash (SHA-256) → pack: NCRP text + email + annexure + ZIP

PIPELINE (asil case par chali)

28 screenshots ingest (Drive ZIP) → smart crop → OCR (offline) → entity extract: UPI ID · txn · UTR · shortlink → QR decode (7349*****@ptaxis) → redact (a/c numbers) + hash (SHA-256) → pack: NCRP text + email + annexure + ZIP

cybercrime.gov.in (NCRP)

copy-paste text (EN/HI)

Cyber cell email (Bihar)

email + crops attached

Bank + PhonePe dispute

txn-wise evidence sheet

Sanchar Saathi

us number block request

Privacy: OCR **device par** chalta hai; redacted copy default hai (kyunki zyadatar log screenshot WhatsApp par bhej dete hain). Full-resolution copies sirf official channels ke liye alag folder me. Original screenshots kabhi modify nahi hote — hash verify karne ke liye rehte hain.

OPS CONSOLEAnnexure + chain of custody

ID	PAYMENT	TXN	UTR	SHA256 (SHORT)
A01	3,000 · PhonePe	T2686*****	462HD163	72bc292c...
A02	2,000 · PhonePe	T2505*****	589581728666	5467e96a...
A03	QR → UPI ID	7349*****@ptaxis	—	f03f4b53...
A04	Phishing SMS + shortlink	cutt.ly/*****	—	17aa2667...

Total 28 files hashed · originals untouched · redacted copies alag folder me.

Rule R24 (auto-report pack) + R25 (crop/redact/hash) — demo me asil case ka **masked** version hai; poora pack workspace me "case_evidence/" folder me (complaint_ncrp.md, complaint_email.eml, annexure_index.csv, evidence_bundle.zip).

28 screenshots → crop · OCR · QR · redact · hash

M6 auto-publish nahi karta — analyst 15-second review ke baad hi registry update hota hai. M7 me NCRP text (HI+EN) + email + annexure CSV + ZIP, hashes ke saath.

R38 · Fraud CONFIRM — email + helpline + payment stop (3 kadam)

R38 · Fraud confirm → 3 kadam (golden hour)

User khud confirm karta hai; app draft/dialer/script ready karti hai — auto-send nahi. Golden-hour clock live chalta hai.

1 · 📧

Cyber cell + bank ko email

done ✓

Ready email (subject + body + annexure index) — Bihar cyber cell, NCRP email ID aur bank nodal officer ko. Aapke naam/account ke full digits sirf official copy me jaate hain.

Mail bhejo (ready draft)

Draft copy karo

To: patnacyberpps-bih@gov.in, sp-cyber@biharpolice.gov.in, ccIU-bih@nic.in

Cc: complaint@bank-nodal.example (apne bank ka nodal officer)

Subject: UPI fraud complaint (financial cyber fraud) — total ₹5,000 · 2 txns · evidence pack attached — [aapka naam & mobile]

Respected Sir/Madam,

Main UPI fraud ka victim hoon. Neeche sirf woh details hain jo evidence me dikhti hain; poora evidence pack (crop kiye screenshots + annexure index + SHA-256 hashes) is mail ke saath attached hai.

--- CASE (evidence-visible) ---

· Payment 1 : ₹3,000 | UPI handle: 7349*****@ptaxis (full digits annexure me)

demo me mail app simulate hua — real device par yahi draft mail app me khulega (annexure attached).

2 · 📞

Helpline par direct baat (payment stop)

done ✓

Ek tap se dialer — 1930 (cyber financial fraud) · 1909 (Sanchar Saathi) · apne bank/PSP ka official number · Bihar cyber cell. Call script screen par likhi milti hai (kya bolna hai, txn/UTR ready).

1930 par call

Bank/PSP helpline

Call script

3 · 🛑

Payment stop (bank + UPI + mandate)

done ✓

Freeze/stop request ka text, UPI app ke “Report fraud” path, aur AutoPay/mandate revoke checklist — copy karke bank ko bhej do.

Stop-request banao

Copy karo

• fraud CONFIRM mark hua (user ne khud confirm kiya) — golden-hour clock chalu

• cyber cell + bank ko email draft ready (Bihar cyber cell 3 IDs + nodal officer cc)

📞 1930 · cyber financial fraud helpline

Aise bolo:

“Sir, UPI fraud hua hai. Payment ₹3,000, UPI handle 7349*****@ptaxis, Txn-T2606252059539226326113, UTR 462HD163. Freeze request chahiye, complaint number dijiye.”

Golden hour me ye call sabse zyada kaam karti hai — bank freeze request isi call par jaati hai. Demo me dialer simulate hua (offline).

• helpline call logged: 1930 · cyber financial fraud helpline

- 1 · 📧 mail draft ready: Bihar cyber cell (3 IDs) + bank nodal officer cc; body me txn ID, UTR, amount, 3 demands, annexure
- 2 · 📞 one-tap dialer: 1930 · 1909 · bank/PSP · Bihar cyber cell — 5-line call script screen par
- 3 · 🛑 payment-stop: txn-wise dispute/chargeback + beneficiary par hold (CFCFRMS) + account freeze/limit + unknown mandate revoke
- 4 (optional) · 👤 parivaar/mohalla alert — masked numbers ke saath, taaki agla victim na bane
- Golden-hour clock user ke confirm karne se chalta hai; 3/3 hone par “complaint number sambhalo” note

Measured, guess nahi — 33-message eval harness

- Wahi engine jo user ke paste par chalta hai, wahi 33 labelled messages (22 scam + 11 legit) par — precision 95% · recall 90% · F1 93%
- CAUTION alag bucket (soft catch / legit friction) aur “PAKA NAHI” bhi ek valid jawab — fake confidence nahi
- Har miss aur false-alarm table me tag hote hain; set self-authored hai (ceiling, field accuracy nahi)
- 3 messages jaan-boojh ke rule-library ke bahar rakhe — taki honest buckets live dikhein

Competitive landscape — 31 peer repos (3 Oct scan)

- 77% checker-saturation · 21/31 ke paas live demo hi nahi · registry check sirf 23% me
- SatarkPay ke 3 axes peer me 0%: interception (chat→UPI), evidence-grade recovery, measured eval harness
- License: 30/31 repos par koi license nahi (all rights reserved) → humne zero code copy kiya, sirf ideas adopt kiye (credit file repo me)
- Purane risks (voice/regional/offline) bhi cover: Hindi voice, senior mode, poora demo offline chalta hai

Peer ideas → SatarkPay (credit + “kya nahi liya”)

Peer repo (public)	Concept	SatarkPay me
prakshithamalla-art/scam-shield-sangyan	negation-aware matching	R27 — bank ka OTP-warning scam nahi ginta
adityakr-git/sangyan (“Ruko”)	client-side redaction + local lists	R28 redactPII() · R26 inline registry lists
patelsachin9879-gif/Sangyan-Kavach + pyharshcodes	registry-number format validator	R26 sebiCheck() — format + domain + watch-list
anuragtiwari-ux/Sangyan-Suraksha (MIT)	measured test set + first-hour recovery	R37 eval harness · R30 “pehle 1 ghante”
surdish/scamshield-bharat · arcimillion/nivesh	senior mode · voice-first	senior mode · Hindi voice (Web Speech)
KshitijSawant17/PATIBIMB · Algo-explorer/Grievance-Clock	deterministic rules · escalation ladder	R31–R36 families · SCORES/SMART ODR rows

Guardrails + privacy (judges ke liye)

SANGYAN ke disqualification rules ka seedha jawab

- Koi stock tip / buy-sell-hold / price prediction / trading algo nahi — R36 sirf “tip ka tareeka” ka risk batata hai
- Koi monetisation funnel nahi; koi tip-group promotion nahi
- Privacy by design: analysis se pehle client-side PII redaction (R28); demo me network call zero; OCR opt-in, image store nahi (sirf entity + hash)
- Koi SMS/OTP/PII harvesting nahi — UsageStats/notification sirf on-device, permission + Play-policy note ke saath (docs/)
- Sab verdict deterministic layer deta hai; LLM sirf samjhaata hai (production me 1 env var) — hallucination-safe
- “Registered hai” certify karna, ya recovery ki guarantee dena — dono se saaf inkaar (honest limits slide)

Impact → Rubric mapping (30 · 25 · 15 · 15 · 15)

- Resilience & Safety Impact (30): interception + evidence-recovery + registry checks; asli case par end-to-end chala (₹5,000 evidence-visible)
- Tier-2/3 Usability (25): Hinglish copy, Hindi voice, senior mode, offline demo, 8-min guided cooling (paisa nahi, samajh)
- Guardrail Compliance & Trust (15): privacy by design, no tips/no funnel, honest non-binary verdicts, credit file + limits slide
- Technical Execution (15): 7 modules, 66 automated checks (jsdom), live eval harness, crawler (784→172→63), chain-of-custody hashing
- Feasibility & Scalability (15): Android parity path (UsageStats + NotificationListener), PSP/bank/telecom partner hooks, on-device-first architecture

Roadmap — 48 ghante me demo se device tak

- h0-4: Kotlin/Compose skeleton — UsageStats listener + MediaStore observer + consent centre
- h4-12: M1 matrix + M3 domain engine ko shared module (app + console parity test)
- h12-20: M4 real LLM hookup (HI/EN) + library RAG + low-confidence → human queue
- h20-30: M5 NotificationListener se mandate parse + revoke flow (synthetic bank notifications)
- h30-40: M6 crawler cron + analyst console; M7 pack ko PSP/bank formats me export
- h40-48: Red-team (mentor scripts), Hindi copy user-test, 3-min demo rehearsal ×5
- Scale: on-device pehle, phir telecom (Sanchar Saathi) + PSP (UPI Help) + exchange (SCORES) hooks

Honest limits + kya hum NAHI karte

Honest limits

- Telemetry permissions ke bina features degrade hote hain (iOS par M1/M2/M5 partial)
- M1 “padha” nahi naap sakta — sirf “kitni der chat screen par the”
- Screenshot ka source-domain 100% reliable nahi — evidence treat karte hain, verdict nahi
- Eval set self-authored hai (ceiling); field calibration ke liye PS/bank data chahiye
- Recovery ki guarantee nahi — hum sirf time-optimised steps dete hain

Kya NAHI karte

- Koi auto-block nahi — payment rukta hai, final call user ki
- WhatsApp automation / READ_SMS / QUERY_ALL_PACKAGES / Accessibility abuse nahi
- Koi stock tip, price prediction, ya “guaranteed return” messaging nahi
- Koi auto-send email/call nahi — draft + dialer + script dete hain, bhejna user ke tap par
- Peer repos se code copy nahi (licenses nahi hain) — sirf ideas, credit ke saath
