

SatarkPay

UPI/wallet fraud se pehle rok do — aur fraud ho jaye to 3 minute me complaint

- SANGYAN · SEBI × NSDL × SNTC IIT (BHU) · Investor Resilience
- Track A (fraud/scam resilience) + Track B (grievance rights) + Track D (behaviour)
- 2,443 registrations · 51 repos scan — 71% checker saturation; SatarkPay ke 3 axes ab bhi sabse patle
- Live demo: sudonishant.github.io/satarkpay-repo · 7 modules · 1 asli fraud case par chala

Problem — scam ab “padhne” ka nahi, “hone” ka hai

SANGYAN guardrails ke andar: koi tip nahi, koi data harvest nahi — sirf suraksha

- 16 crore+ demat accounts · 70% naye Tier-2/3 se · F&O me 9/10 retail traders loss me (problem statement)
- Aaj ke scam chat-se-shuru hote hain: WhatsApp/Telegram par baat → phir UPI app → phir paisa
- Peer repos ka 77% kaam “message paste karo → score dekho” hai — yaani fraud ke BAAD
- Recovery ka golden hour pehla 60 minute hai; usme sahi complaint ho jaye to freeze-trace ka mauka bachta hai
- Asli case (humare evidence pack se): ₹5,000 evidence-visible loss, ₹30,625 maanga gaya, 9 scam families

Solution map — ek journey, saat module

SatarkPay — chat se payment tak, aur fraud ke baad: 7 modules + R38

M1 · Chat-Before-Pay — matrix, block nahi

M1 · Chat-Before-Pay matrix — 4 cells, koi auto-block nahi

Saved contact ≈1 min (ya call-confirm) · unknown = 8 min guided · 10+ min chat ke baad payment = notification · officer/offer mila to T3 hold.

M1 live demo — teeno haalat

Saved + 2 min chat → 1:00 fast path

Saved + 12 min chat → notification

Unknown + lambi chat → hold + callback

Timer sirf foreground dwell naapta hai; “It's me” dabane se notification nahi khulta — sawal ya trusted-person confirm chahiye.

Wallet + AutoPay Audit

kaunse app juda hai · kya auto-debit chal raha hai

AutoPay alert — 2 risky mandate

“quickearn-pro@ybl: ₹299 DAILY, kal se shuru, domain unverified. 3 doosre users ne bhi same ID par mandate diya.”

Daily/Weekly = mahine me ₹8,970+ nikal sakta hai.

UPI / wallet apps is phone par

Re-scan

PhonePe

UPI Circle: 1 delegate

autopay 2

linked: HDFC **4432

check

Google Pay

autopay 1

linked: HDFC **4432

ok

Feature 6 · Wallet / AutoPay / Link Audit

RULE R20

Ye batata hai: kaunse UPI/wallet apps is phone par hain aur kaunse bank account se juda hai, kaunse auto-pay (e-mandate) chal rahe hain, aur konsa app delegate/UPI-Circle ya recurring link rakh raha hai. Red flag: naya mandate + unverified domain + Daily/Weekly frequency.

REAL ANDROID APIS

queryIntentActivities(“upi://pay”) sabhi UPI apps

NotificationListenerService

mandate debit alerts

SMS parse (DLT mandate format)

“will be auto-debited”

PSP mandate API (partner hook)

authoritative list

UPI Circle delegate check

naya delegate?

WARNING KAB MILTI HAI

Daily/Weekly mandate jiska purpose “one-time” bataya gaya

Mandate ≤ 7 din purana + merchant domain unverified

Naya delegate add (UPI Circle) — OTP-based “verify” ke naam par

Ek bank account 4+ UPI apps me linked

Wallet app jo lambe time se use nahi hua par linked hai

Verified merchant, monthly, known amount → chup

Note: “connected apps” ka matlab yahan — installed UPI apps + unke linked accounts + autopay mandates + delegates. Kisi bhi app se bank credential share karne ki baat nahi hoti; hum sirf phone par dikhe wali cheezein padhte hain (usage/notification/SMS), aur finance apps ke internal account list ko PSP API se lete hain.

OPS CONSOLE

Mandate-abuse cluster

Daily/unknown mandate = red, one-tap revoke

R22: usi payee ko 24h me 3rd payment → cooling (staircase), 4th → hold. Screenshot ki image store nahi hoti — sirf entity + hash.

Link / Domain Check

Payment se pehle — gateway koi bhi ho

<https://rbi-nodal-verify.xyz/refund?amt=49>

[rbi-nodal-verify.xyz](#)

[sbj.onlinekyc-update.top](#)

[razorpay checkout](#)

[amazon-pay-offer](#)

[vahan-challan-pay](#)

[unknown-but-clean](#)

[onlinesbj.sbi](#)

Check karo

L4

rbi-nodal-verify.xyz · TLD .xyz = high-risk list

amber TLD .xyz — fraud me bahut use hota hai (verified brand isse nahi lete)

red RBI ka naam use ho raha hai par asli domain "rbi.org.in" nahi hai

User ko dikhne wali copy (HI): "Ye rbi-nodal-verify.xyz asli company ki website nahi lagti. Yahan payment mat karo. Koi AAPko is link par bhej raha hai to woh scam hai."

TURANT: Ruk jao — is page par payment mat karo · Asli app/site khud khoi kar check karo (link ke nahi) · Kisi me bhej hai to screenshot + number save karo (1930 ke juvt.) · Bhaine wale

Feature 3 • Domain / Website Trust

Koi bhi request — link, SMS, WhatsApp message, QR ke peeche ka page, ya screenshot me dikha **domain** — usko 4-level ladder par rakha jaata hai. Chahe **payment gateway legit** ho (Razorpay/PayU/Cashfree/BillDesk), agar **merchant ka domain verified nahi** hai to warning milti hai. Kyunki "gateway achha hai" ka matlab "merchant achha hai" nahi hota — ye classic 2026 trick hai.

4-LEVEL LADDER

- ✓ L1 - Verified (RBI/NPCI/bank/PSP registry)
- ✓ L2 - Verified merchant (allowlist)
- ! L3 - Unverified but clean → amber warning
- ✗ L4 - Lookalike / fake → red warning

Wording principle (deck se):

unknown-clean domain par hum "scam" nahi likhte — "**verified nahi hai, dhyaan se**" likhte hain. Red sirf tab jab structural proof ho (lookalike/TLD/mis-TLS/shortener).

SEBI / NSDL registry check

"SEBI-registered" ka dawa sabse am trick hai. Hum teen cheezin check karte hain: (1) registration-number ka **format** (INZ/INH/INA + 9 digits), (2) official portal domains (sebi.gov.in · scores.gov.in · smartodr.in · nsdl.co.in), (3) debarred-entity naam. Number valid bhi ho to hum "verified" nahi kehte — **sebi.gov.in par khud check karo** link dete hain.

DEMO: DAAWE PAR TEST

"SEBI registered. Reg: INA998877112"

"SEBI registered" (koi number nahi)

format ok — phir bhi "khud verify"

red flag

red flag

HONEST LIMIT

Demo me registry offline hai (format + domain + chhoti debarred list). Production me: SEBI ke public intermediaries/debarred lists ko read-only feed se lo (jaise M6 Intel Desk), cache karo, aur user ko **source** + **date** dikhao. Hum khud kabhi "ye registered hai" certify nahi karte.

Poochho

Human analyst se poochho (queue)

Ye demo me rule-engine + threat library par chalta hai (offline). Production me LLM + wahi citations — neechhe dekho.

Client-side redaction on:

phone/API/aadhaar/account numbers analysis se pehle mask ho jaate hain (koi bhi text bahar nahi jaata).

Feature 4 · AI Sanchalak (chat LLM)

User chat kar ke puchh sakta hai — WhatsApp chat, email, SMS, screenshot ka text paste karke. Jawab ka structure fixed hai: **verdict → 3 reason (matched signals) → turant kya karo → kya mat karo → threat-library citation**. LLM se **verdict nahi** aata — verdict deterministic rules + domain engine + threat library se aata hai, LLM sirf **samjhaata hai** (ye hallucination-safe design hai).

PIPELINE

Input normalise (text/link/OCR)

Signal extract: platform, vector, link, UPI ID, amount, urgency words

Domain engine (MS) + payee intel + journey memory

Family map (F1-F18) → verdict + confidence

LLM = explanation layer (HVEN/12 lang), citations only from library

"pakka nahi" par human queue + 1930 pack

LLM MODE (production, 1 env var)

SATARKPAY_LLH=1 + key (Grog/Gemini/OpenAI/self-host)

system prompt = "kabhi naya verdict invent mat karo, sirf diya gaya verdict explain karo"

RAG = threat library (TL-T24 + Intel Desk ke naye T25+)

prompt-injection guard: user text untrusted, tools nahi

PII: text **device** par hi rakhta hai, server ko sirf extracted entities + hash

log: verdict + reason codes (audit), raw chat nahi

Honest limit: "naya" scam jo library me nahi hai, us par confidence low rahega — tab jawab "paka nahi bata sakta + human/1930" hota hai, fake confidence nahi. Yahi cheez misuse ko bhi rokta hai.

OPS CONSOLE

Sanchalak queue

Escalated: "RBI safe account" video call — ₹85,000 pending

verdict: F1 · confidence high · user ne 3 min me reply kiya · analyst callback ≤5 min · rule R1 attach

live

Low-confidence: "courier ne bola customs fee ₹2,100 UPI kar"

library me partial match (T23/T22) · naya variant ho sakta hai → Intel Desk review queue me bheja

review

verdict + 3 reason + registry flag (R26)

L1...L4 ladder + gateway≠merchant warning

R26: SEBI number ka format (INZ/INH/INA + 9 digits) + official portal domain check — “registered hai” kabhi certify nahi karte. R27: bank ka apna OTP-warning scam nahi ginta. R28: PII device par hi mask.

M6 · Intel Desk (live crawler) | M7 · Evidence pack

784 raw → 172 relevant → 63 novel (aaj)

28 screenshots → crop · OCR · QR · redact · hash

M6 auto-publish nahi karta — analyst 15-second review ke baad hi registry update hota hai. M7 me NCRP text (HI+EN) + email + annexure CSV + ZIP, hashes ke saath.

R38 · Fraud CONFIRM — email + helpline + payment stop (3 kadam)

R38 · Fraud confirm → 3 kadam (golden hour)

User khud confirm karta hai; app draft/dialer/script ready karti hai — auto-send nahi. Golden-hour clock live chalta hai.

alert
(optional)

Ek tap me ready WhatsApp-style message: "Is number/UPI par paisa mat bhejo — humare ghar me is
se fraud hua hai" (numbers masked). Family + mohalla group ko bhej sakte ho — taaki agla victim
na bane. % optional hai; user chaahe to skip kare.

📢 Alert
banao

📄 Copy
karo

• fraud CONFIRM mark hua (user ne khud confirm kiya) — golden-hour clock chalu
• cyber cell + bank ko email draft ready (Bihar cyber cell 3 IDs + nodal officer cc)

📞 1930 • cyber financial fraud helpline

Aise bolo:
"Sir, UPI fraud hua hai. Payment ₹3,000, UPI handle 7349*****@ptaxis, Txn T2606252059539226326113, UTR 462HD163. Freeze request chahiye,
complaint number dijiye."
Golden hour me ye call sabse zyada kaam karti hai — bank freeze request isi call par jaati hai. Demo me dialer simulate hua (offline).
• helpline call logged: 1930 • cyber financial fraud helpline

🛑 Payment-stop request (copy karke bank/PSP ko bhejo)

Sir/Madam,
Mere UPI fraud hua hai. Please turant karein:
1) Txn T2606252059539226326113 (UTR 462HD163, ₹3,000) aur Txn T2505301200368307075101 (UTR 589501728666, ₹2,000) par
dispute/chargeback raise karein.
2) Beneficiary VPA 7349*****@ptaxis par hold/freeze request (CFCFRMS) bhejain.
3) Mere account par temporary debit freeze/limit laga dein jab tak complaint number na mile.
4) WhatsApp/SMS me aaye kisi bhi rope/mandate ko block karein.
Complaint number: (helpline/email se milne par yahan daalein) - Evidence pack attached (hashes + crops).
Dhanyavaad.
UPI app me bhi: En → Help → "Report fraud/unauthorised" → screenshot upload. AutoPay list se unknown mandate revoke karo (tab OS).

✅ Tense stop ho gaya. Ab is complaint number ko sambhal ke rakho — bank/PSP follow-up me wahi maangta hai. NCRP acknowledgement +
email sent-copy bhi save kar lo.

• payment-stop request ready (bank + PSP + mandate)

Honest: email dhejnal/call karna user ki marzi se hota hai (koi auto-send nahi) — app sirf draft, dialer aur script ready karti hai. Helpline par aapka txn
ID + UTR + time sabse pehle poochna padta hai, isliye wah sabse upar rakha gaya hai.

3/3 steps · email draft (cyber cell 3 IDs) · 1930 call script · payment-stop (CFCFRMS)

Optional step 4: parivaar/mohalla ko alert (masked numbers) — taaki agla victim na bane. Ye step user chaahe to skip kare.

Measured, guess nahi — 33-message eval harness

- Wahi engine jo user ke paste par chalta hai, wahi 33 labelled messages (22 scam + 11 legit) par — precision 95% · recall 90% · F1 93%
- CAUTION alag bucket (soft catch / legit friction) aur “PAKA NAHI” bhi ek valid jawab — fake confidence nahi
- Har miss aur false-alarm table me tag hote hain; set self-authored hai (ceiling, field accuracy nahi)
- 3 messages jaan-boojh ke rule-library ke bahar rakhe — taki honest buckets live dikhein

Competitive landscape — 51 repo scan (3 Oct 2026)

- 77% checker-saturation · 21/31 ke paas live demo hi nahi · registry check sirf 23% me
- SatarkPay ke 3 axes peer me 0%: interception (chat→UPI), evidence-grade recovery, measured eval harness
- Peer repos me licenses na ke barabar — humne zero code copy kiya, sirf ideas adopt kiye (credit: NOTICE.md)
- Purane risks (voice/regional/offline) bhi cover: Hindi voice, senior mode, poora demo offline chalta hai

Peer ideas → SatarkPay (credit + “kya nahi liya”)

Peer repo (public)	Concept	SatarkPay me
prakshithamalla-art/scam-shield-sangyan	negation-aware matching	R27 — bank ka OTP-warning scam nahi ginta
adityakr-git/sangyan (“Ruko”)	client-side redaction + local lists	R28 redactPII() · R26 inline registry lists
patelsachin9879-gif/Sangyan-Kavach + pyharshcodes	registry-number format validator	R26 sebiCheck() — format + domain + watch-list
anuragtiwari-ux/Sangyan-Suraksha (MIT)	measured test set + first-hour recovery	R37 eval harness · R30 “pehle 1 ghante”
surdish/scamshield-bharat · arcimillion/nivesh	senior mode · voice-first	senior mode · Hindi voice (Web Speech)
KshitijSawant17/PATIBIMB · Algo-explorer/Grievance-Clock	deterministic rules · escalation ladder	R31–R36 families · SCORES/SMART ODR rows

Guardrails + privacy (judges ke liye)

SANGYAN ke disqualification rules ka seedha jawab

- Koi stock tip / buy-sell-hold / price prediction / trading algo nahi — R36 sirf “tip ka tareeka” ka risk batata hai
- Koi monetisation funnel nahi; koi tip-group promotion nahi
- Privacy by design: analysis se pehle client-side PII redaction (R28); demo me network call zero; OCR opt-in, image store nahi (sirf entity + hash)
- Koi SMS/OTP/PII harvesting nahi — UsageStats/notification sirf on-device, permission + Play-policy note ke saath (docs/)
- Sab verdict deterministic layer deta hai; LLM sirf samjhaata hai (production me 1 env var) — hallucination-safe
- “Registered hai” certify karna, ya recovery ki guarantee dena — dono se saaf inkaar (honest limits slide)

Impact → Rubric mapping (30 · 25 · 15 · 15 · 15)

- Resilience & Safety Impact (30): interception + evidence-recovery + registry checks; asli case par end-to-end chala (₹5,000 evidence-visible)
- Tier-2/3 Usability (25): Hinglish copy, Hindi voice, senior mode, offline demo, 8-min guided cooling (paisa nahi, samajh)
- Guardrail Compliance & Trust (15): privacy by design, no tips/no funnel, honest non-binary verdicts, credit file + limits slide
- Technical Execution (15): 7 modules, 66 automated checks (jsdom), live eval harness, crawler (784→172→63), chain-of-custody hashing
- Feasibility & Scalability (15): Android parity path (UsageStats + NotificationListener), PSP/bank/telecom partner hooks, on-device-first architecture

Roadmap — 48 ghante me demo se device tak

- h0-4: Kotlin/Compose skeleton — UsageStats listener + MediaStore observer + consent centre
- h4-12: M1 matrix + M3 domain engine ko shared module (app + console parity test)
- h12-20: M4 real LLM hookup (HI/EN) + library RAG + low-confidence → human queue
- h20-30: M5 NotificationListener se mandate parse + revoke flow (synthetic bank notifications)
- h30-40: M6 crawler cron + analyst console; M7 pack ko PSP/bank formats me export
- h40-48: Red-team (mentor scripts), Hindi copy user-test, 3-min demo rehearsal ×5
- Scale: on-device pehle, phir telecom (Sanchar Saathi) + PSP (UPI Help) + exchange (SCORES) hooks

Honest limits + kya hum NAHI karte

Honest limits

- Telemetry permissions ke bina features degrade hote hain (iOS par M1/M2/M5 partial)
- M1 “padha” nahi naap sakta — sirf “kitni der chat screen par the”
- Screenshot ka source-domain 100% reliable nahi — evidence treat karte hain, verdict nahi
- Eval set self-authored hai (ceiling); field calibration ke liye PS/bank data chahiye
- Recovery ki guarantee nahi — hum sirf time-optimised steps dete hain

Kya NAHI karte

- Koi auto-block nahi — payment rukta hai, final call user ki
- WhatsApp automation / READ_SMS / QUERY_ALL_PACKAGES / Accessibility abuse nahi
- Koi stock tip, price prediction, ya “guaranteed return” messaging nahi
- Koi auto-send email/call nahi — draft + dialer + script dete hain, bhejna user ke tap par
- Peer repos se code copy nahi (licenses nahi hain) — sirf ideas, credit ke saath
